## CLAIM AMENDMENTS

## 1 - 4. (canceled)

- 5. (new) A plastic film for coverage with openings for weight insertion at outer edges and being of a predetermined length and width, the length being longer than the width and having a elongated outer-edge zone, the edges being folded and welded to a main body of the film with consecutive lengthwise umbrella welds forming pockets for weight insertion.
- 1 6. (new) The plastic film defined in claim 5 wherein 2 the elongated zone at each of the edges is 15 cm wide and the 3 folded edge incorporates the elongated zone and is up to 20 cm 4 wide.
- 7. (new) The plastic film defined in claim 6 wherein
  the elongated zone at each edge is up to 5 cm wide.
- 8. (new) The plastic film defined in claim 6 wherein
  the folded edge is 10 15 cm wide.
- 9. (new) The plastic film defined in claim 5 wherein
  the umbrella welds are spaced from each other by at most 100 cm and
  form non-welded openings along a length of the plastic film of at
  most 20 cm.

- 10. (new) A plastic film for use forming a downwardly2 open U-shaped tunnel over a row of plants, the film having:
- a longitudinally extending center part of predetermined length;
  - a pair of unitary edges of predetermined transverse width transversely flanking the center part and both stretched to a length greater than the length of the center part, the edges being folded up over a transverse width greater than the predetermined width; and
    - a multiplicity of transverse welds at the folded-up edges forming along each edge a row of inwardly open pockets, whereby the stretched edges naturally separating from the center part when the film is formed into the downwardly open U-shaped tunnel so that the pockets gap open and can be filled with material to weight down the film.
- 11. (new) The plastic film defined in claim 10 defined
  in claim 10 wherein the welds are umbrella-shaped with a
  transversely inwardly pointing roof part and a base part extending
  to bottoms of the flanking pockets.
- 1 12. (new) The plastic film defined in claim 10 wherein
  the edge is formed above bottoms of the pockets with throughgoing
  drain holes.
